News Headline: Solar plane leaves India for next stop in Myanmar |

Outlet Full Name: Associated Press (AP)

News Text: NEW DELHI (AP) - A solar-powered airplane on a round-the-world journey took off Thursday from the northern Indian town of Varanasi and was headed for its next stop in Myanmar.

Swiss pilots Bertrand Piccard and Andre Borschberg are taking turns flying the aircraft as they attempt to circumnavigate the globe on the journey that was expected to take five months.

The fuel-free aircraft, called the Solar Impulse 2, is powered by more than 17,000 solar cells on its wings that recharge the plane's batteries, enabling it to fly during the day or night. The single-seat Swiss-made plane was expected to land in Mandalay in Myanmar later Thursday.

The flight has attracted attention around the world from people who see solar power as the fuel of the future, providing a source of clean, renewable energy.

The plane's journey began last week in Abu Dhabi, when Borschberg flew the first leg of the trip to Muscat, Oman.

For the second leg, Piccard was at the controls of the aircraft. The 1,465-kilometer (910-mile) flight from Muscat to Ahmadabad in western India took nearly 16 hours, and took the plane over the Arabian Sea in its first sea crossing.

The Solar Impulse 2 is slated to make 12 stops during its 35,000-kilometer (21,700-mile) trip, including two stops in China, before it crosses over the Pacific Ocean. It will then land in Hawaii and the U.S. Midwest and the East Coast before flying over the Atlantic Ocean.

Some legs of the trip, such as over the Pacific and Atlantic oceans, means five days and five nights of flying solo.

News Headline: Brown, lawmakers to announce drought-relief package |

Outlet Full Name: Associated Press (AP)

News Text: SACRAMENTO, Calif. (AP) - Gov. Jerry Brown and Democratic legislative leaders plan to announce an emergency drought-relief plan as California enters its fourth dry year.

Brown's office announced a Thursday morning news conference at the state Capitol to present the legislation, but it released no details.

The drought has forced farmers to leave fields unplanted and left thousands in the Central Valley out of work.

Their announcement comes one year after Brown signed a \$687 million drought-relief package. That funding provided immediate aid such as drinking water for communities facing dire shortages and food and rental assistance. Most of the money is going to local agencies for projects like water recycling and new wells.

Spokespeople for the governor, Senate President Pro Tem Kevin de Leon and Assembly Speaker Toni Atkins all declined comment.

News Headline: Kansas State researches using drones to protect crops |

Outlet Full Name: Associated Press (AP)

News Text: MANHATTAN, Kan. (AP) - Kansas State University is researching how to use drones to detect invasive insects and emerging diseases in wheat fields.

The \$1.74 million three-year project will initially target the Russian wheat aphid and wheat stripe rust, also commonly referred to as "yellow rust." The research partners are Australia's Queensland University of Technology, the Victorian Department of Environment and Primary Industries, and the Queensland Department of Agriculture, Fisheries and Forestry.

Kansas State says flights will be conducted in fields around Kansas. Researchers in Australia are conducting complementary flights to collect supporting data.
